

# Array Methods (Part 1)

## 10 MOST USED METHODS

Nathan  
Sebastian

# 1. shift()

Removes the **first element** from an array and returns that element.

```
let myArray = [1, 2, 3];
myArray.shift(); // 1

console.log(myArray); // [2, 3]
```

# 2. pop()

Removes the **last element** from an array and returns that element.

```
let myArray = [1, 2, 3];
myArray.pop(); // 3

console.log(myArray); // [1, 2]
```

Nathan  
Sebastian

## 3. **unshift(args)**

Adds **one or more elements** to the **beginning** of an array. Returns the new length.

```
let myArray = [1, 2, 3];
myArray.unshift(0); // 4

console.log(myArray); // [0, 1, 2, 3]
```

## 4. **push(args)**

Adds **one or more elements** to the **end** of an array and returns the new length.

```
let myArray = [1, 2, 3];
myArray.push(4, 5); // 5

console.log(myArray); // [1, 2, 3, 4, 5]
```

Nathan  
Sebastian

## 5. filter(callbackFn, this)<sup>optional</sup>

Creates a **new array** from all elements that pass the test specified in the callback function.

```
let myArray = [1, 2, 3];
myArray.filter(num => num > 1); // [2, 3]
```

## 6. sort()

Sorts the elements of an array in place and returns the **sorted** array.

```
let myArray = [5, 2, 3];
myArray.sort(); // [2, 3, 5]
```

Nathan  
Sebastian

## 7. reverse()

Reverses the **order of elements** in an array.

```
let myArray = [1, 2, 3];
```

```
myArray.reverse(); // [3, 2, 1]
```

## 8. isArray(array)

Checks if a given value is an array.  
It's a **static method** so call it from the Array class

```
let myArray = [1, 2, 3];  
Array.isArray(myArray); // true
```

Nathan  
Sebastian

## 9. splice(start, deleteCount, item...)

Changes the **contents of the array** by removing or replacing existing elements and/or adding new elements.

```
let myArray = [1, 2, 3];
myArray.splice(1, 0, 6, 7); // [2, 3]

console.log(myArray); // [1, 6, 7, 2, 3]
```

## 10. slice(start, end)

Returns a **shallow copy** of a portion of an array into a new array object.

```
let myArray = ['a', 'b', 'c', 'd'];
let slicedArray = myArray.slice(1, 3);

console.log(slicedArray); // ['b', 'c']
```
